

Marine  
Integrated Climate Solutions

*BlueComfort Classic  
Perfect Climate Control by integrating  
a heating and a cooling solution into  
one system*

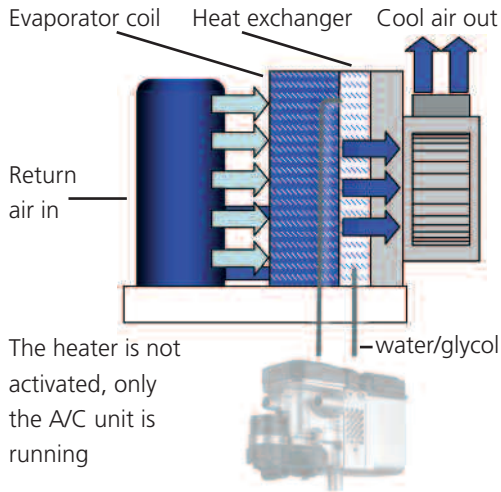

The BlueComfort Classic offers the benefits of a self-contained A/C unit complemented by a compact, high efficient diesel heater:

- Super quick warm-up of cabin, independent of sea water temperature
- Opportunity to have heating on board while sailing (no need for generator running)
- Unrivalled dehumidification power in "reheat" mode
- Individual temperature control of each cabin

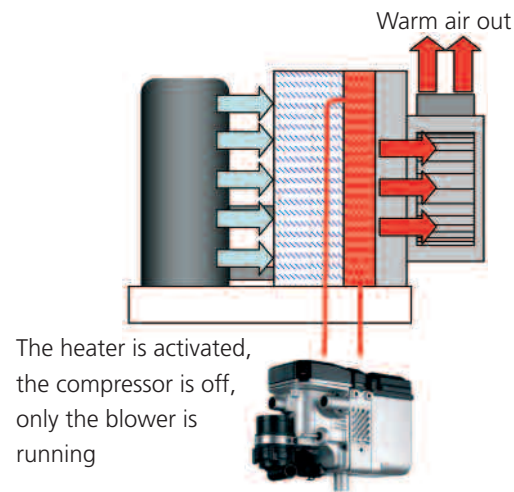

## How does it work?

In a **BlueComfort Classic** system an **A/C system** and a **water heater** are **integrated into one system**. The BlueComfort Classic units are equipped with a second heat exchanger which is connected to a diesel fired water heater. In cooling mode, the water heater is off and only the A/C circuit is running. In heating mode the water heater is running, heating up the heat exchanger and thus the air passing through. In the "reheat" mode, the air is first cooled down and then heated up again, thus being dehumidified.

### Cooling mode
